Product Design and Manufacturing

Assignment Week-1

1. What does DFM stand for?
   a) Design For Maintenance
   b) Development For Manufacturing
   c) Design For Manufacturing
   d) None of these

2. _____ refers to the creative act of fashioning an object without concern with how it can be made.
   a) Aesthetic design
   b) Manufacturing
   c) Logistic
   d) Producibility

3. Design by evolution is advantageous because it allows for easy modification.
   a) True
   b) False

4. In Product Life Cycle, once the customers become well versed with the product, the sales enter period of _____.
   a) decline
   b) stability
   c) exponential growth
   d) fluctuation

5. Laser beam is an example of product design by innovation.
   a) True
   b) False

6. What is the recommended balance for performance specifications?
   a) They should not be extremely narrow
   b) They should be extremely broad
   c) They should not be narrow nor broad
   d) None of these

7. Which step involves the identification of product function in simultaneous engineering?
   a) Material selection
   b) Design conceptualization
   c) Recovery
   d) Distribution

8. In context of manufacturing capability, manufacturing plants have access to limited technology and hence can process only a limited number of materials.
   a) True
   b) False

9. Why manufacturing plants for automobiles can not produce medicinal products?
   a) Lack of interest
   b) Technological constraints
   c) Insufficient funding
   d) All of these

10. The growth period is always followed by a decline in sales when competitive products entered the market.
   a) True
   b) False
